

CONCIERGE⚡PAD

SIMPLE. SCHOOL SECURITY.

MORE THAN JUST VISITOR MANAGEMENT

CONCIERGEpad is a school safety platform that was designed to safeguard students. This is accomplished through real-time tools that monitor visitors as they enter your facility, student behavior while they are on-site and student dismissal whether it is early release, aftercare pickup or the normal car-line process.

KEY BENEFITS

FACIAL RECOGNITION

With CONCIERGEpad's facial recognition technology, an organization can sign-in visitors, dismiss students and clock in employees efficiently and accurately. This new feature further improves security at any facility by reducing fraud, identifying problematic individuals and speeding up the overall process. If a visitor, parent or employee has previously registered before, the iPad camera will scan that person's facial features allowing the visitor to bypass multiple check-in workflow screens; creating a lasting first impression.

EXTENDED CARE MANAGEMENT

CONCIERGEpad's complete extended care management module makes signing in children into aftercare a breeze. Add children to aftercare in bulk, by class or by name. In addition, the administration can bulk sign-out children for activities. Upon aftercare sign-out your back office has access to customized billing reports and invoicing.

PAPERLESS CHECK-IN & CHECKOUT

Impress your visitors with an innovative and easy to use sign-in experience that produces a visitor badge for all guests.

VOLUNTEER TRACKING

Recognize and reward individuals and families with our simple tracking reports. Our volunteer sign-in and sign-out process will ensure that all hours are accounted for.

BACKGROUND CHECKS AT CHECK-IN

Keep unwanted guests from entering your facility by performing a sex offender and persona non grata check when a visitor signs in.

ADMINISTRATIVE REPORTING

Administration has access to a rich reporting engine. Focus in on the data that is most important to you using a date picker to narrow your search. If we have the data we can build the report.

LOCKDOWN REPORT & SILENT ALARM

Generate an evacuation report of all signed in guests or notify security personnel when someone doesn't look right.

MOBILITY

The iPad and Brother label printer can both be wireless. As a result, your student and visitor management solution is never tied down to one location.

VISITOR ARRIVAL NOTIFICATIONS

When a visitor checks into your facility the person they are visiting will be notified via SMS and email.

BEHAVIOR & TARDY MONITORING

CONCIERGEpad offers a comprehensive Behavior Monitoring solution. Track and monitor negative and positive student behavior such as uniform violations, electronic confiscations or tardy students. If necessary CONCIERGEpad can generate consequences, print demerit slips as well as assign students to scheduled detentions. Finally, when a detention is ready to be served the administration can check a student into detention

EARLY RELEASE & AFTERCARE PICKUP

Never have a question about who a child went home with. CONCIERGEpad captures the photo and signature of anyone that removes a child from your school. We take it one step further by notifying both parents about their early or aftercare pickup. If you're worried that the wrong individual may try to dismiss a student we have you covered there as well. CONCIERGEpad will reconcile against a divorce and unauthorized list to keep your students in the right hands.

SILENT DISMISSAL

With the CONCIERGEpad Car-line Pickup System administrators will benefit from an efficient, organized and electronic dismissal process. School administrators can use our mobile app to dispatch pickup requests that will appear on any tablet, PC or smartboard. A classroom facilitator can easily view live pickup requests, send students to appropriate car lanes and place them in their appropriate vehicles. With our all-in-one car-line product you will create a safe and automated environment without the need for bullhorns or intercoms.

EMERGENCY MESSENGER

With the CONCIERGEpad EM System schools can safeguard their organizations utilizing direct to staff emergency notifications. Administrators and staff have the capabilities to instantly reach every employee to alert them of immediate threats, provide them with critical information and receive key updates in real time. Lockdown messages can be sent from any mobile device saving valuable time during a crisis. All CONCIERGEpad iPads go into lockdown mode clearly displaying to all guests in your lobby that there is a lockdown in process.
